# Moody Radio: This Just In

## 2025 Fall Satellite Sun Outage Forecast | October 3-13

With the coming of fall, it is time to prepare for upcoming satellite sun-outages that may disrupt your programming. This occurrence happens when the satellite transits the sun's disk for a few minutes each day over a period of several days in many parts of the United States.

The Moody Radio satellite channels (Moody-1 and Moody-2) on SES-11 (105-degrees West Longitude) Transponder 21C will experience the first outages of the season on or around Friday, October 3, 2025.

The following is a representative list of major cities around the country displaying the projected 2025 Fall Outages, centering on the longest day with beginning and ending times of the predicted outages. The Tech Specs sheet also includes the Moody-1 Emergency Backup streams that can be used by affiliates in the event of a loss of the feed via your XDS receiver.

***If you lose programming here are the direct links to our emergency programming streams***
